Special hazards arising from the substance or mixture

Battery may burst and release hazardous decomposition products when exposed to a fire situation. Lithium ion batteries contain flammable electrolyte that may vent, ignite and produce sparks when subjected to high temperature(> $150^{\circ}C(302^{\circ}F)$ ), when damaged or abused (e.g. mechanical damage or electrical overcharging); may burn rapidly with flare-burning effect; may ignite other batteries in clothes proximity.

### **Specific protective actions fire-fighters:**

Protective squipment: Wear self-contained respirator. Wear fully protective impervions suit.

#### 6. Accidental Release Measures

**Protective precautions:** Wear protective equipment. Keep unprotected persons away. Ensure adequate ventilation **Protective equipment:** Not data available.

### **Emergency procedures:**

Remove ignition sources, evacuate area. Sweep up using a method that does not generate dust. Collect as much of the spilled material as possible, placed the spilled material into a suitable disposal container. Keep spilled material out of sewers, ditches and bodies of water.

#### **Enviromental precautions:**

Do not allow material to be released to the environment without proper governmental permits **Methods and materials for containment and cleaning up:** All waste must refer to United Nations,the national and regulations for disposal. See Section 7 for information on safe handling. See Section 8 for information on personal protection equipment. See Section 13 for disposal information.
